Load capacities above bold line are based on structural strength and tipping must not be relied upon as a limitation of lifting capacity. Rated loads must not be exceeded.

### Notes for lifting capacities

Rated loads do not exceed 85 % of tipping load with the machine properly levelled on firm ground.

360° duties – on outriggers fully extended, other than noted above.

Note counterweight required as listed in relevant lifting capacity columns.

For safe crane operation due allowance must be made to compensate for high winds, side load, pendulum action and other hazardous conditions. No side pull permitted.

Hook blocks, slings and/or boom attachments are considered part of the load, and

their weight must be deducted from the rated lifting capacity to determine the net load.

Lifting capacities are based on boom sections locked by remote control.

Consult crane manual to determine weight reduction for load handling devices and boom attachments.

Operate crane strictly in compliance with operator's manual.
