Why Buy a National Series 600E?

2

- 20-ton (18.1-t) maximum capacity
- 140 ft. (42.7 m) maximum vertical reach with jib*
- 100 ft. (30.5 m) maximum vertical hydraulic reach main boom*
- Hydraulic Capacity Alert system (HCA)
- Proportional boom extension
- High performance planetary winch
- Heavy-duty piston pump hydraulics
- * Maximum vertical reach is ground-level to boom tip height at maximum extension and angle with outriggers/stabilizers fully extended.

- **20 ton Rating** – The new 600E provides a 20-ton capacity.
- **New 90 ft. Four-section Boom** – The longest in its size range. The longer boom allows the operator to perform more lifts without the use of a jib, reducing setup time and improving efficiency.
- **Self-lubricating “Easy glide” Wear Pads** – The self-lubricating pads, standard on the 600E reduce the conditions that cause boom chatter and vibration. The net result is smoother crane operation.
- **Internal Anti-two-block** – The patent-pending design, standard on the 600E eliminates the external reel and wire. No more snagging reel or wire on obstructions.
- **Adjustable Swing Speed** – A control knob located on the swing motor brake release valve can be easily adjusted to the crane operator’s swing speed preference.
- **Optional New Integral Steel Torsion Bedbox** – Integral welded torsion box and flatbed. Further reduces frame flex.
- **Auxiliary Stabilizers** –
 - Independent stabilizer control
 - Bolt/Clamp on rear stabilizers
- **Quick-reeve Boom Tip and Sheave Blocks** – These standard features simplify rigging changes.
- **Pre-painted Components** – Painting crane components before assembly reduces the possibility of rust, improves serviceability and enhances the appearance of the machine.
- **Burst-of-Speed Winch** – Provides faster winch payout and pickup of unloaded cable.
- **Improved Serviceability** –
 - A removable winch allows the internal telescoping cylinder to be removed quickly, without dismantling the boom.
 - Bearings on the boom extend and retract cables can be greased through access holes in the boom side plates.
 - Internal anti-two-block wire routing eliminates damage potential.
 - The boom sheave case is open, allowing access to replace the internal anti-two-block wire and to observe internal boom components.
 - Pre-paint reduces rust.
 - Internal boom parts have been reduced, decreasing service time when rebuilding the machine.
- **New State-of-the-Art Hydraulic System** – Provides smoothest operation in the market.
 - The hydraulic system features a control strategy of constant pressure, flow on demand to optimize performance. This control strategy matches the required flow to the demand (speed) of the function while the variable displacement piston pump is regulated to maintain a constant pressure to the eight section main valve. Because the pump pressure is constant, multi-function operation is very good, and precise, smooth metering is assured regardless of load.
 - Main valve spools are designed to both meter the flow and limit the maximum flow to each function. Available oil flow is optimized by using “gravity” for Boom down – no pump flow is necessary.
- **National Crane Is the Market Leader** – National is number one in the production of commercial truck-mounted boom trucks.
 - National has the boom truck industry’s leading test program. Every structural part of the crane is fully life cycle tested at full capacity. In addition to cycle testing, each model is subjected to state-of-the-art strain gauge testing that measures metal deformation as small as one-millionth of an inch. The net result is that weak areas are caught in test, not on job sites where costly downtime occurs.
 - All outrigger, lift and telescoping cylinders are manufactured to National Crane Designs, so that the seals, packing glands, and end plates are traced for accurate shipment of replacement parts.
 - National has a formalized quality program and is ISO 9001 approved.
- **National Crane Is a Quality Product That Will Provide Years of Service**
 - Parts are available for all National Crane machines, even if they are over 20 years old.

600E

mounting configurations

The configurations are based on the Series 600E with an 85% stability factor. The complete unit must be installed in accordance with factory requirements and a test performed to determine actual stability and counterweight requirements since individual truck chassis vary.

Configuration 1 with Torsion Box – 180° Full Capacity Work Area

Working area	180°
Gross Axle Weight Rating Front	14,000 lb (6350 kg)
Gross Axle Weight Rating Rear	34,000 lb (15,442 kg)
Gross Vehicle Weight Rating	48,000 lb (21,773 kg)
Wheelbase	232 in (589 cm)
Cab to Axle/trunnion (CA/CT)	164 in (417 cm)
Frame Section Modulus (SM) under crane:	
110,000 PSI (758 MPa)	15.9 in ³ (261 cm ³)
Frame Section Modulus (SM) over rear stabilizers:	
110,000 PSI (758 MPa)	13 in ³ (213 cm ³)
Stability Weight, Front	8,000 lb (3629 kg) minimum*
Stability Weight, Rear	10,500 lb (4763 kg) minimum*
Estimated Average Final Weight	30,000 lb (13,608 kg)

This configuration is the least expensive method for the Model 600E. This mount, with the crane mounted behind the cab, requires the least weight of all mounts for stability; thus, you can haul larger payloads on your truck. It requires standard subbase and rear (ASH) stabilizers.

Configuration 2 with Torsion Box – 360° Full Capacity Work Area

Working area	360°
Gross Axle Weight Rating Front	14,000 lb (6350 kg)
Gross Axle Weight Rating Rear	34,000 lb (15,442 kg)
Gross Vehicle Weight Rating	48,000 lb (21,773 kg)
Wheelbase	232 in (589 cm)
Cab to Axle/trunnion (CA/CT)	164 in (417 cm)
Frame Section Modulus (SM) under crane:	
110,000 PSI (758 MPa)	20 in ³ (328 cm ³)
Frame Section Modulus (SM) over rear stabilizers:	
110,000 PSI (758 MPa)	13 in ³ (213 cm ³)
Stability Weight, Front	7,700 lb (3130 kg) minimum*
Stability Weight, Rear	10,500 lb (3175 kg) minimum*
Estimated Average Final Weight	30,600 lb (13,879 kg)

Requires front SFO stabilizer to give machine full capacity 360° around the truck. Truck must meet the minimum requirements above. Front stabilizer gives the machine a solid base, helping the operator control loads precisely.

Configuration 3 with Torsion Box – Rear Mount

Working area	180°
Gross Axle Weight Rating Front	12,000 lb (5443 kg)
Gross Axle Weight Rating Rear	34,000 lb (15,442 kg)
Gross Vehicle Weight Rating	46,000 lb (20,865 kg)
Wheelbase	222 in (564 cm)
Cab to Axle/trunnion (CA/CT)	156 in (396 cm)
Frame Section Modulus (SM) under crane:	
110,000 PSI (758 MPa)	15.9 in ³ (261 cm ³)
Frame Section Modulus (SM) over rear stabilizers:	
110,000 PSI (758 MPa)	15.9 in ³ (213 cm ³)
Stability Weight, Front	6,500 lb (3629 kg) minimum*
Stability Weight, Rear	9,500 lb (4763 kg) minimum*
Estimated Average Final Weight	28,750 lb (13,040 kg)

Allows the installation of the Model 600E on a chassis. In most cases, the chassis will not require reinforcing, and the amount of counterweight required is minimized, increasing payload capacities.

Notes:

- Gross Vehicle Weight rating (GVWR) is dependent on all components of the vehicle (axles, tires, springs, frame, etc.) meeting manufacturers' recommendations: always specify GVWR when purchasing trucks
- Diesel engines require a variable speed governor and energize-to-run fuel solenoid for smooth crane operation; electronic fuel injection requires EET engine remote throttle

- All mounting data is based on a National Series 600E with an 85 percent stability factor
- The complete unit must be installed in accordance with factory requirements, and a test performed to determine actual stability and counterweight requirements per SAE J765; contact the factory for details
- Transmission neutral safety interlock switch is required with optional remote control

*Estimated axle scale rates prior to installation of crane, stabilizers and subbase for 85% stability.

specifications

Boom and Jib Combinations Data

Available in five basic models.

4

Model 638E – Equipped with a 16-38 ft. (4.88-11.58 m) three-section boom. Maximum tip height is 48 ft. (14.63 m) (no jib option available).

16-38 ft. (4.88-11.58 m) three-section boom.

Model 647E – Equipped with 19-47 ft. (5.79-14.33 m) three-section boom. This model can be equipped with an 18-29 ft. (5.49-8.84 m) two section jib. Maximum tip height w/29 ft. (8.84 m) jib is 86 ft. (26.24 m).

19-47 ft. (5.79-14.33 m) three-section boom.

19-47 ft. (5.79-14.33 m) three-section boom.

6FJ29M 18-29 ft. (5.49-8.84 m) two-section jib

Model 671E – Equipped with a 27-71 ft. (8.23-21.64 m) three-section boom. This model can be equipped with a 25-45 ft. (7.62-13.72 m) two-section jib. Maximum tip height w/45 ft. (13.72 m) jib is 125 ft. (38.25 m).

27-71 ft. (8.23-21.64 m) three-section boom.

27-71 ft. (8.23-21.64 m) three-section boom.

6FJ45M 25-45 ft. (7.62-13.72 m) two-section jib

Model 680E – Equipped with a 24-80 ft. (7.32-24.38 m) four-section boom. Maximum tip height is 90 ft. (27.44 m). (no jib option available).

24-80 ft. (7.32-24.38 m) four-section boom.

Model 690E – Equipped with a 27-90 ft. (8.23-27.43 m) four-section boom. This model can be equipped with a 25-45 ft. (7.62-13.72 m) two section jib. Maximum tip height w/45 ft. (13.72 m) jib is 144 ft. (43.95 m).

27-90 ft. (8.23-27.43 m) four-section boom.

27-90 ft. (8.23-27.43 m) four-section boom.

6FJ45M 25-45 ft. (7.62-13.72 m) two-section jib

Note: Maximum tip is measured with outriggers/stabilizers fully extended.

600E Winch Data

600E Winch Data

- All winch pulls and speeds in this chart are shown on the fourth layer
- Winch line pulls would increase on the first and second layers
- Winch line pulls may be limited by the winch capacity or the ANSI 5 to 1 cable safety factor, shown below this chart
- Hook blocks are rated at maximum capacity for the block. **Do not exceed rated cable pull with any block.**

			1 Part Line	2 Part Line	3 Part Line	4 Part Line	5 Part Line	6 Part Line
Winch	Cable Supplied	Average Breaking Strength	Lift and Speed	Lift and Speed	Lift and Speed	Lift and Speed	Lift and Speed	Lift and Speed
Standard Planetary Winch	9/16" Diameter Rotation Resistant	38,600 lb (17,463 kg)	7,700 lb (3,492.66 kg) 110 fpm (33.53 m/m)	15,400 lb (6,985.32 kg) 55 fpm (16.76 m/m)	23,100 lb (10,477.98 kg) 37 fpm (11.28 m/m)	30,800 lb (13,970.65 kg) 28 fpm (8.54 m/m)	38,500 lb (14,514.96 kg) 22 fpm (6.71 m/m)	40,000 lb (14,514.96 kg) 18 fpm (6.71 m/m)
Standard With "Burst-of-Speed"	9/16" Diameter Rotation Resistant	38,600 lb (17,463 kg)	7,700 lb (3,492.66 kg) 193 fpm (58.83 m/m)	15,400 lb (6,985.32 kg) 97 fpm (29.57 m/m)	23,100 lb (10,477.98 kg) 64 fpm (19.51 m/m)	30,800 lb (13,970.65 kg) 49 fpm (14.94 m/m)	38,500 lb (14,514.96 kg) 39 fpm (11.89 m/m)	40,000 lb (14,514.96 kg) 32 fpm (11.89 m/m)

Winch	Bare Drum Pull	Allowable Cable Pull
With standard rotation resistant rope	10,200 lb (4627 kg)	7,700 lb (3493 kg)

Block Type	Rating	Weight
Downhaul Weight	3.85 ton (3.49 t)	150 lb (68 kg)
1 Sheave Block	11.55 ton (10.48 t)	200 lb (91 kg)
2 Sheave Block	19.25 ton (17.46 t)	355 lb (161 kg)

capacities

Load Rating Chart: Series 690E with 45 ft. Jib

Other series 600E Load Rating Charts are available. National will send you a chart on request – or you may secure needed load rating information through your nearest National dealer.

5

CAUTION:

- Do not operate crane booms, jib extensions, any accessories or loads within 10 ft (3m) of live power lines or other conductors of electricity.
- Jib and boom capacities shown are maximum for each section.
- Do not exceed capacities at reduced radii
- Load ratings shown on the load rating charts are maximum allowable loads with the outriggers properly extended on a firm, level surface and the crane leveled and mounted on a factory recommended truck.
- Always level the crane with the level indicator located on the crane.
- The operator must reduce load to allow for factors such as wind, ground conditions, operating speeds and their effects on freely suspended loads.
- Overloading this crane may cause structural collapse or instability.
- Weights on any accessories attached to the boom or loadline must be deducted from the load chart capacities.
- Do not exceed jib capabilities at any reduced boom lengths.
- Do not deadhead lineblock against boom tip when extending boom or winching up.
- Keep at least three wraps of loadline on drum at all times.
- Use only specified cable with this machine.

SERIES 690E WITH 45 FT JIB

NOTE:

- Operate with jib by radius when main boom is fully extended. If necessary increase boom angle to maintain loaded radius.
- Operate with jib by boom angle when main boom is not fully extended. Do not exceed rated jib capacities at any reduced boom lengths.

accessories

Radio Remote Controls –

Eliminate the handling and maintenance concerns that accompany cabled remotes. Operate to a range of about 250 feet (76 m), varying with conditions.

• **Model R4R**

One-Person Basket –

Strong but lightweight steel basket with 300-lb (139-kg) capacity, gravity hung with swing lock and full body harness.

• **Model B1-S**

• **Model 2B1-S** (for dual locking baskets)

Heavy-duty Personnel Basket –

1,200-lb. (544-kg) capacity steel basket with safety loops for four passengers. Gravity leveling 72- x 42-inch (183- x 107-cm) platform. Fast attachment and secure locking systems. Load chart must show 2,300 lb. (1043 kg) minimum to operate this accessory.

• **Model BSA-1**

• **Model BSA-R1** (provides rotation)

Hydraulic Oil Cooler –

Automatic, self-contained radiator system with electric fans cools oil under continuous operation.

• **Model OC**

Continuous Rotation –

Allows rotation of turret/boom without rotation stop.

• **Model CR**

7
