**Area of Operation**

DO NOT OPERATE IN THIS AREA WITHOUT FRONT STABILIZER DEPLOYED

**Deductions from Rated Loads for Handling Devices**OVERHAUL BALL: 175 lbs.  
1 SHEAVE LOAD BLOCK: 200 lbs.**General Notes**

- The operator must read and understand the Owner's Manual before operating this crane.
- Positioning or operation of crane beyond areas shown on this chart is not intended or approved except where specified in Owner's Manual.
- Loaded boom angles at specified boom lengths give only an approximation of the operating radius. The boom angle before loading should be greater to account for deflections. Do not exceed the operating radius for rated loads.
- Use rating of next longer boom for boom lengths not shown. Use rating of next greater radius for load radii not shown.
- Boom must be fully retracted when jib is erected before lowering below minimum angle. Retracted jib has no lifting capacity below a 50° boom angle.
- Use rating of next lower boom angle for boom angles not shown on jib load rating chart.
- Lifting off the main boom point while the swing around jib is erected is not intended or approved.
- Do not lower boom into this area, as hydraulic pressure will not allow raising the boom without retracting boom first.
- Crane load ratings on outriggers are based on freely suspended loads with the machine leveled and standing on a firm uniform supporting surface. No attempt shall be made to move a load horizontally on the ground in any direction.

- Practical working loads depend on supporting surface, wind and other factors affecting stability such as hazardous surroundings, experience of personnel, and proper handling, must all be taken into account by the operator.
- The maximum load which may be telescoped is limited by hydraulic pressure, boom angle, and boom lubrication. It is safe to attempt to telescope any load within the limits of the load rating chart.

**INFORMATION**

- Deductions must be made from rated loads for stowed jib, optional attachments, hooks and loadblocks (see deduction chart). Weights of slings and other load handling devices shall be considered a part of the load.
- Crane load ratings with outriggers are based on outriggers and stabilizers extended and set with all load removed from the carrier wheels.
- Load ratings do not exceed 85% of tipping load.

**DEFINITIONS**

- Operating radius is the horizontal distance from the axis of rotation to the center of the vertical hoist line or load hook with load suspended.
- Loaded boom angle as shown in the Load Ratings Chart is the included angle between the horizontal and longitudinal axes of the boom base after lifting rated load at rated radius.

## Boom Truck Crane

### SPECIFICATIONS

#### Boom

63 ft. (19.2 m) three section full power mechanically synchronized boom. Patented keel boom design utilizes a keel-shaped baseplate combined with a deep, four plate boom section to optimize strength / rigidity-to-weight ratio. Exclusive, patented color-coded boom and load charts allow the operator to easily and quickly determine boom extension, boom angle and load capacity. Maximum sheave height with three section 63 ft. (19.2 m) boom is 73 ft. (22.3 m). Maximum sheave height with optional two-stage 40 ft. (12.2 m) jib is 113 ft. (34.4 m).

#### Winch

Hydraulic winch with gear motor and planetary reduction gearing provides 2-speed operation. First layer rope pull is 11,400 lbs. (5171 kg). Wire rope size is 9/16" (14 mm) with 37,000 lbs. (16 783 kg) breaking strength.

#### Operating Speeds

Main frame / turret assembly worm gear rotation provides 180° rotation (370° with optional front bumper outrigger). Swing rotation is 40 seconds. Boom up/down is 22/22 seconds and boom extend/retract is 50/22 seconds.

#### Hydraulics

Three section pump allows the operator to perform simultaneous crane operations (winch, boom and swing). Capacities are 36, 20 and 11 gpm (136.3, 75.7 and 41.6 lpm). Combined system capacity is 67 gpm (253.6 lpm).

#### Controls

Fully proportional, excellent metering characteristics for precise boom movements. Independent outrigger controls allows the crane to be stable and level in rigorous working conditions. Load Moment Indicating System has audio alarm and functional shut down when operator encounters an overload situation.

#### Outriggers

Wide-stance link-type main outriggers have a 19 ft. 2 in. (5.8 m) pin-to-pin spread when fully extended. A-Frame rear outriggers have 10 ft. 1 in. (3 m) tip-to-tip span.

#### Subframe

Single fabricated, closed-box style subframe yields greater strength and rigidity. Wheel base for standard truck crane mounting configuration is 234 in. (5.94 m).
